This project aims to analyze Steph currey's 17 year NBA career regular season games - All played on the same team!

General Info:

• Draft: seventh overall pick in the 2009 NBA Draft
• Team drafted: Golden State Wariors(GSW)
• Age drafted: 21
• Current Age: 38
• Games per season: 82(regular season)
Table source: ESPN website

Bullets to research:

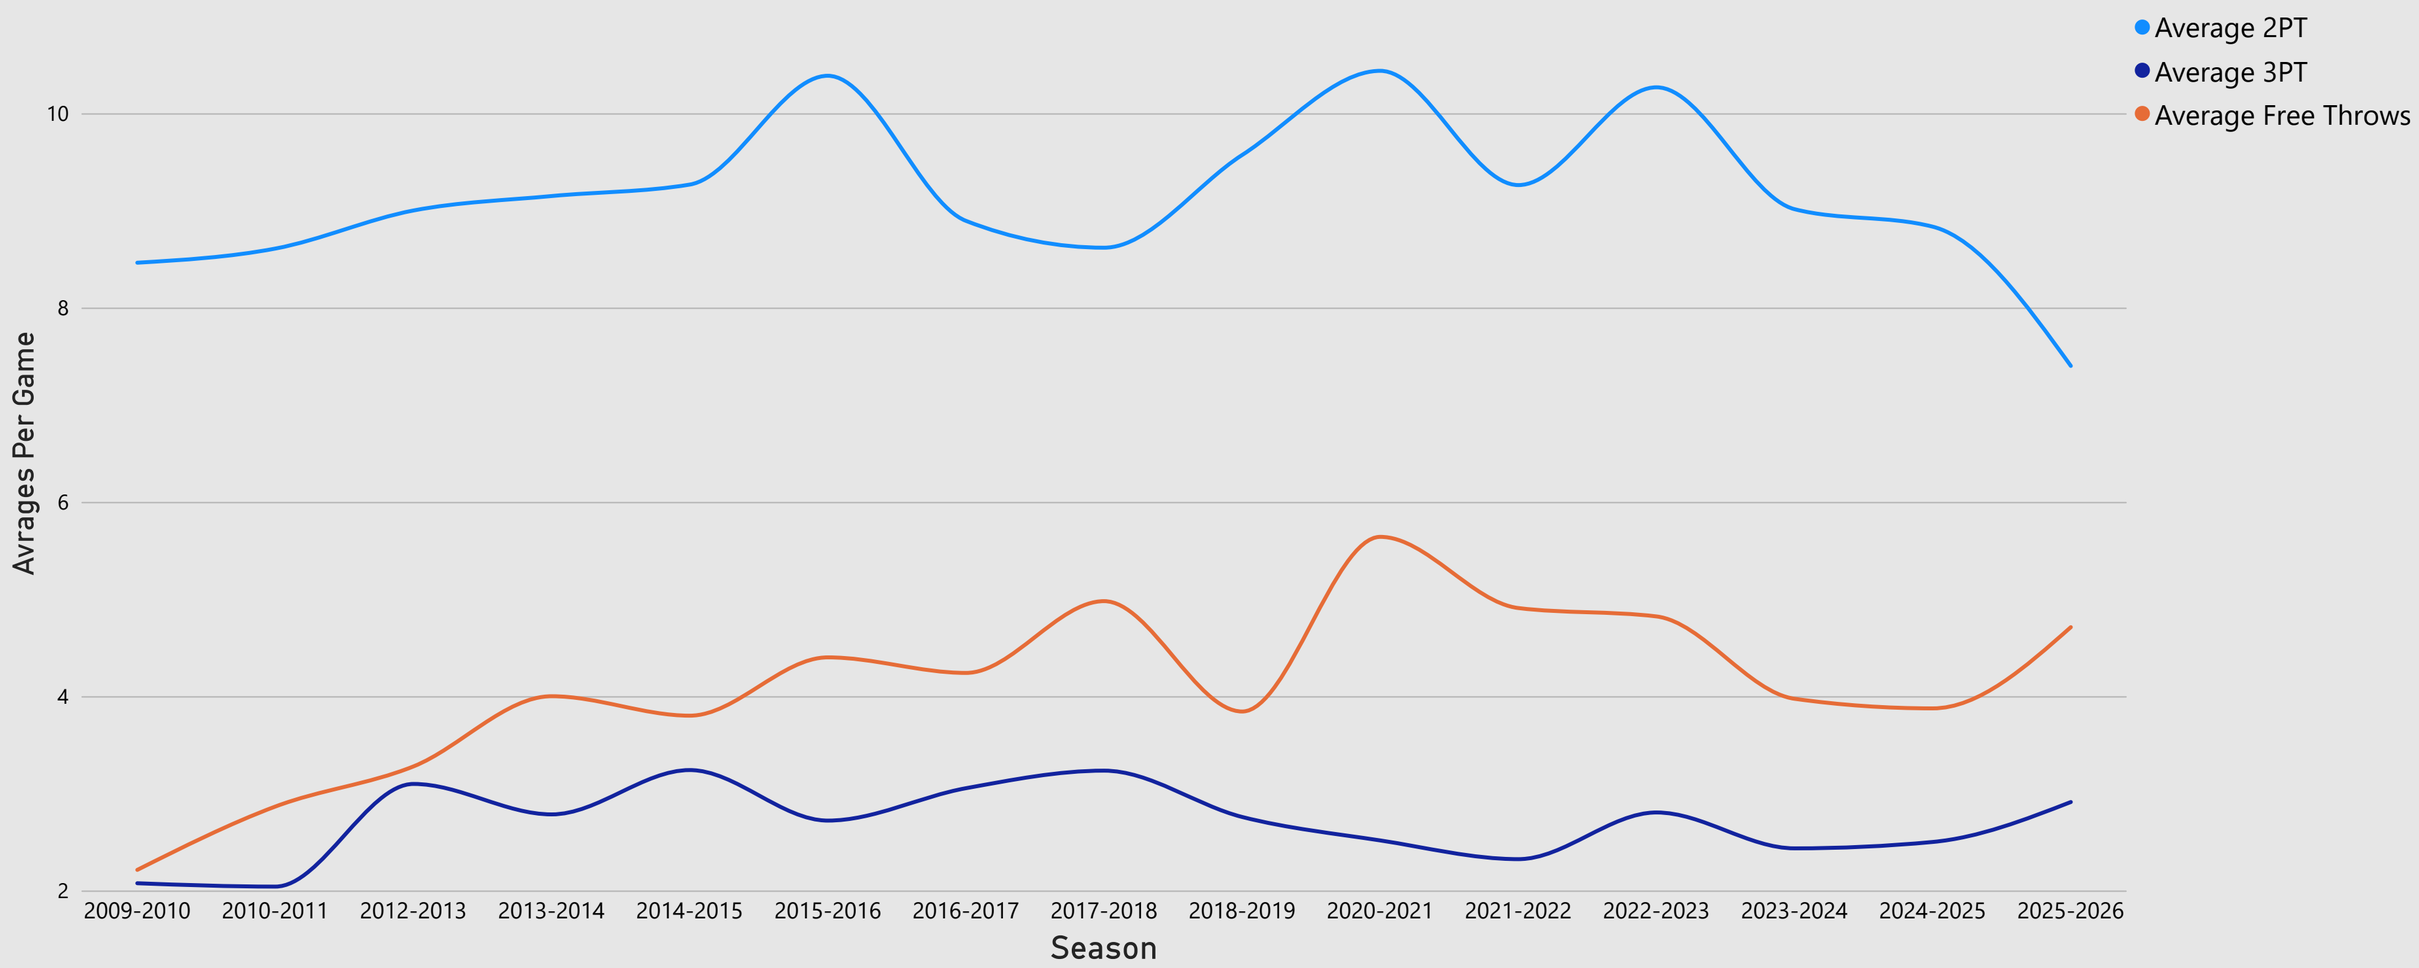

• 1. How did Steph evolve during the years since draft up to current Season?
• 2. What was Steph's contribution to winning games?
• 3. Did facility location (Home/Away) impact Steph's game?
• 4. What is Steph's 'best' shot?

Each research question in seperate tab with proper navigation buttons, Enjoy....

Go To First Chart

Next Chart

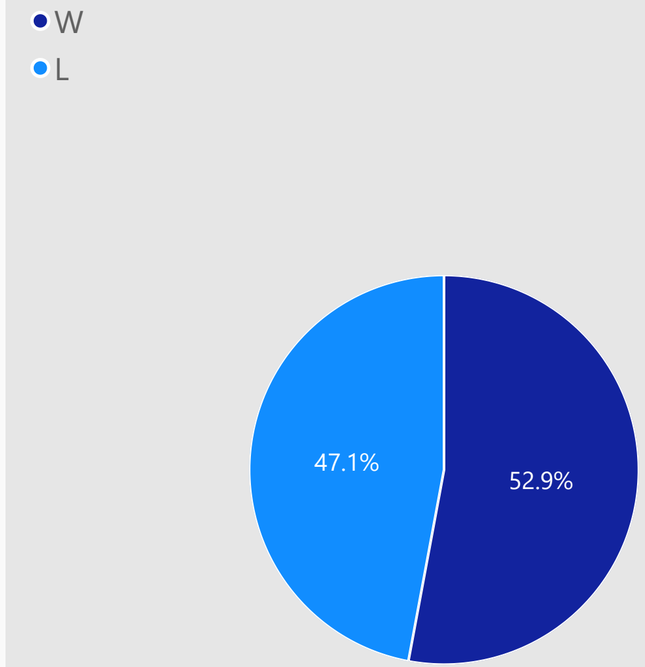

Playstyle Evolution - Shots Made (Graph 1)

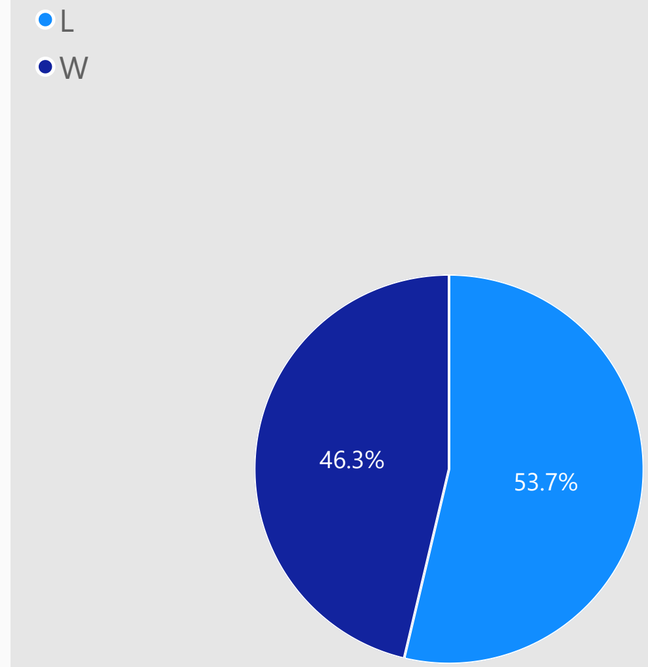

2PT - Steph's most contributing to score shot showing far above attempts made.
3PT - Major rise starting from 2012 to 2017 with a slight decrease in coming years.
Free Throws - showing major rise meaning more fouls have been made on Steph over the years.

Next Chart

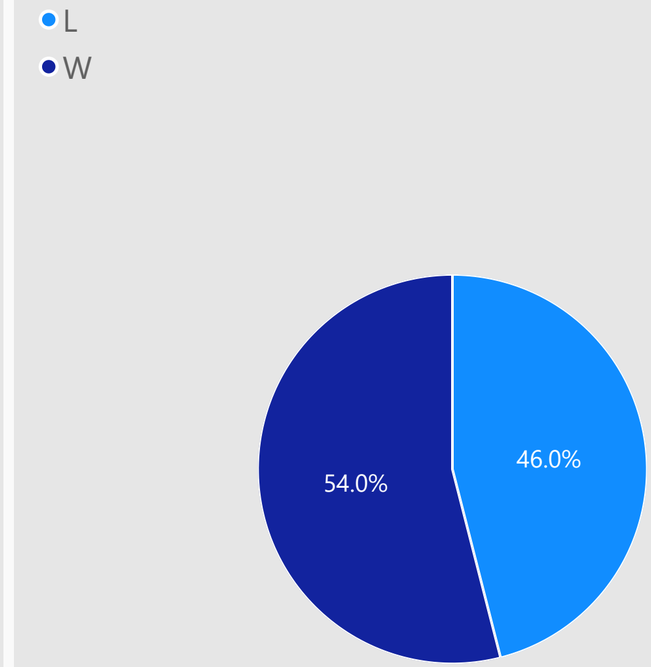

Points Across win/lose (Graph 6.0)

Turnovers Across win/lose (Graph 6.1)

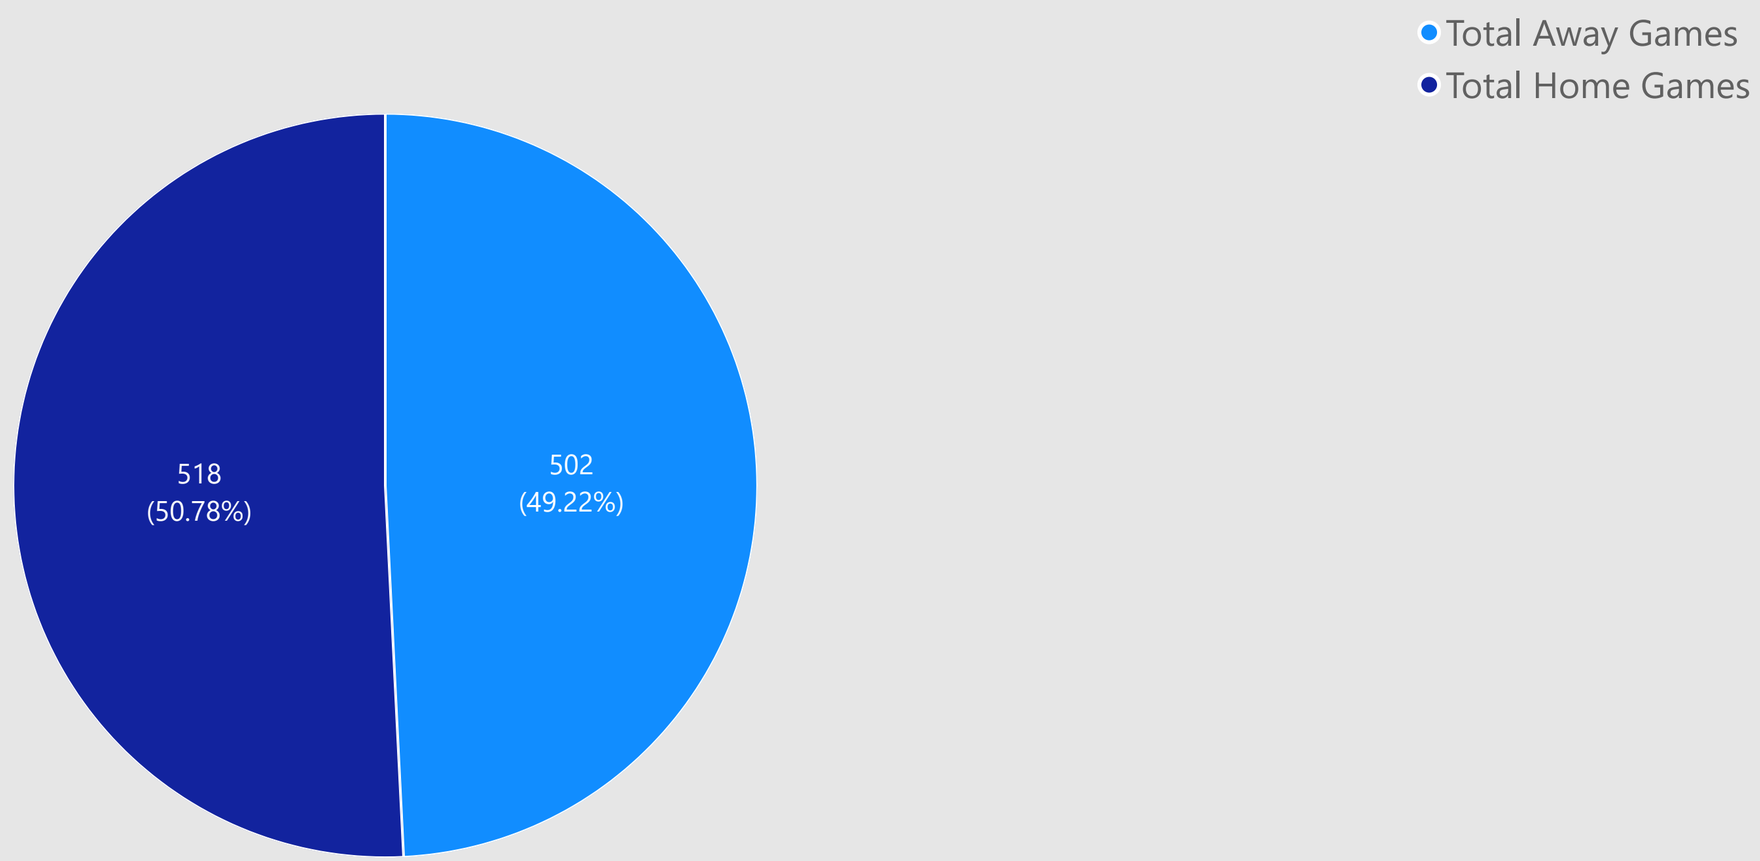

Assists Across win/lose (Graph 6.2)

All graphs are dicisive, when Steph plays better(even by small margins) his team wins.
Standing out are FG% Across won/lose and 3p% across win/lose with higher margins.
*** Turnover is a negative stat (The more you have the worse you play) ***

Next Chart

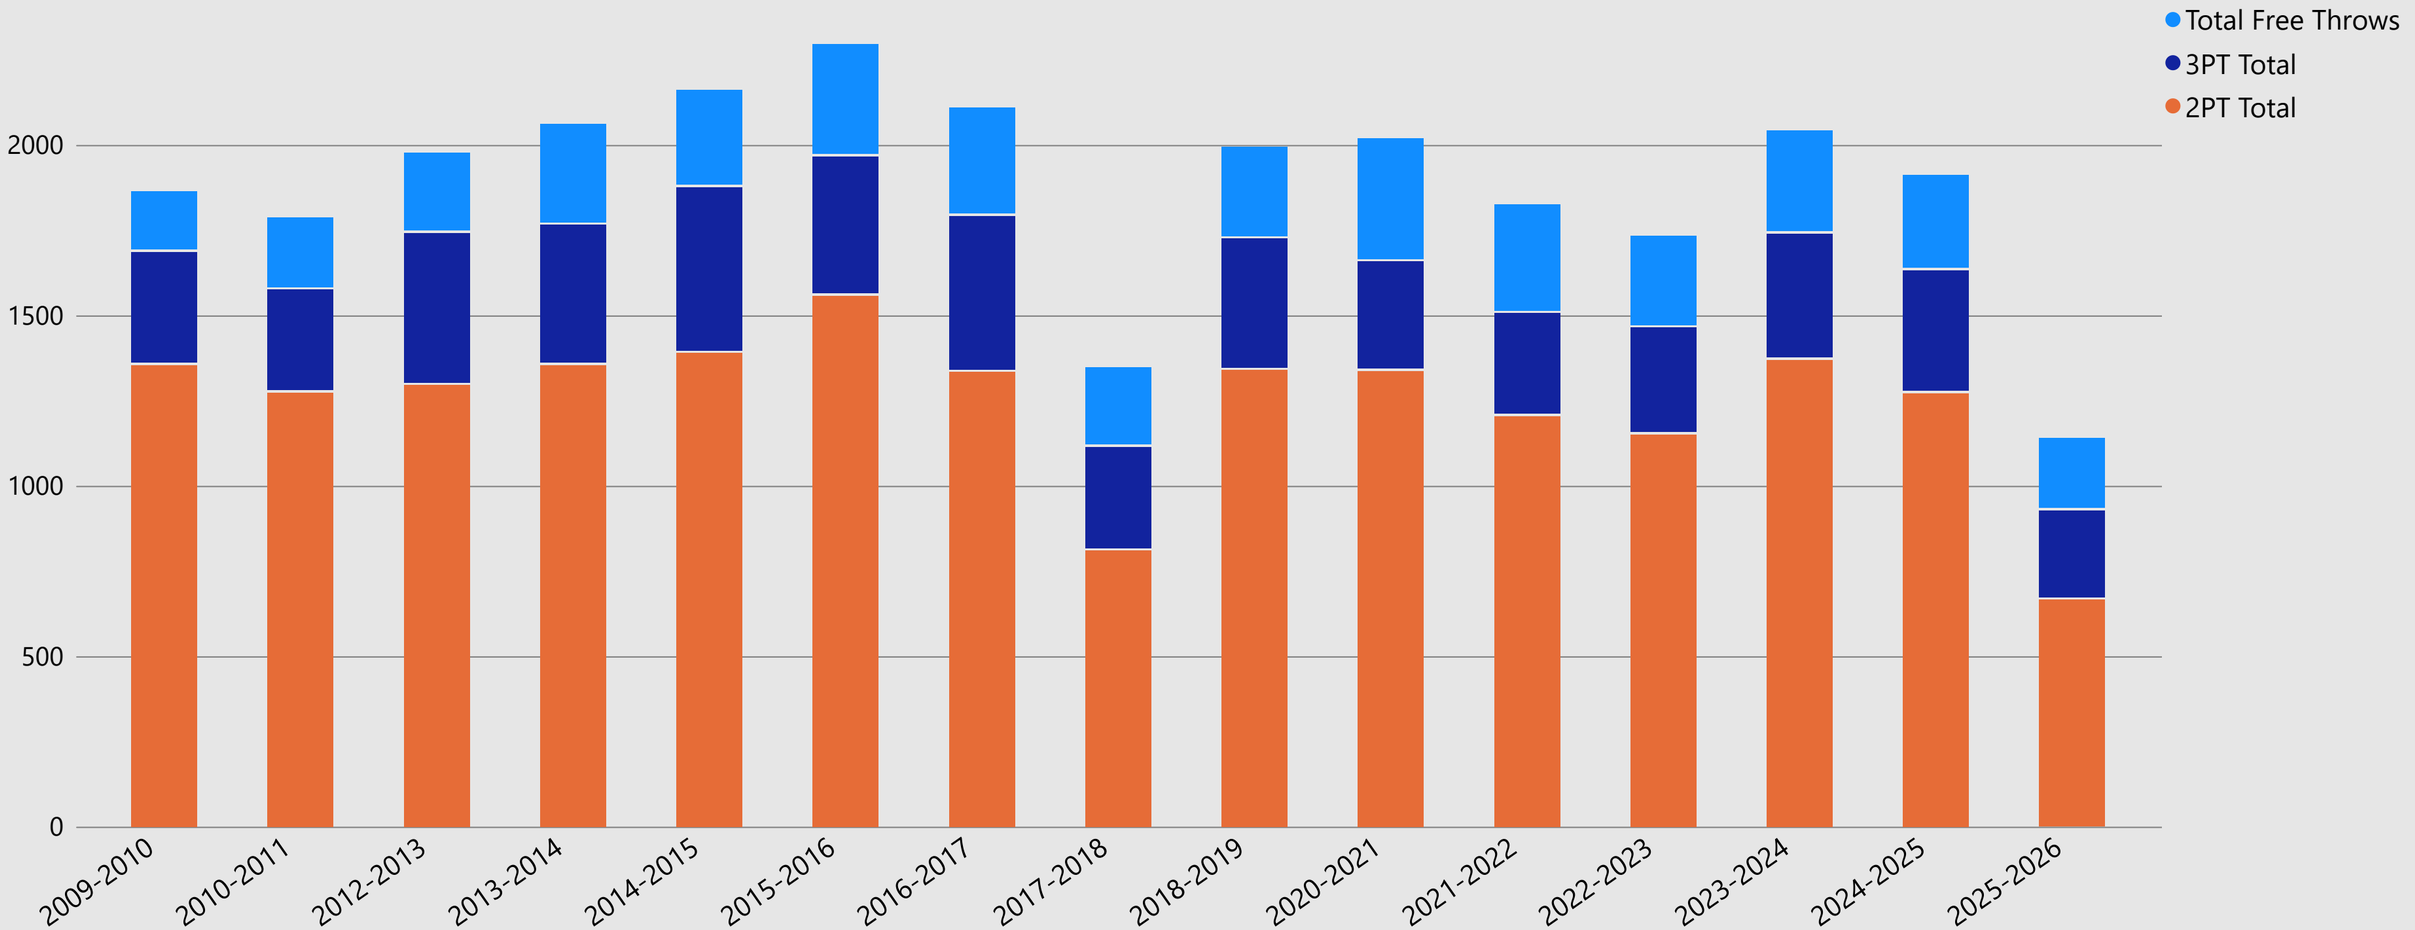

Home & Away

Home VS Away games slightly tipping in favor of home.

Next Chart

Total Points Breakdown by Season (Graph 15)

Anlyzing shots in raw numbers to see that Steph's best score contributing shot is 2PT.

Analysis Conclusions:

1. How did Steph evolve during the years since draft up to current Season?

Over the years, Steph's most contributing to score shot is 2PT (Graphs 1, 2)
Amazing 3PT percentage was kept throuout the years with higher percentages in 2PT(Graph 3)
2PT slightly improved(Graph 4.0) while 3PT showed greater improvements(Graph 4.2)
Over the years, Steph drew more fouls resulting in more Free Throws(Graph 4.4). He also significantly improved in Free Throws percentage(Graph 4.5)
Steph has built his game over the years resulting in higher points per game.(Graph 4.6)
Amazing efficiency improvement over the years with more and more ball possessions & scoring(Graph 5)
Also, this is a classic representation of game style shift. A star was born with more ball possessions and much more scoring per minute play(Graph 5)
Another enormous improvement in Steph's game is Free Throw Percentage who this year has earned him a spot in the "90% elite club"
Making 9 out of every 10 Free Throw shot(Graph 4.5)

2. What was Steph's contribution to winning games?

When Steph plays better(even by small margins) his team usually wins(Graphs 6.X)
When Steph averaged more his team won, standing out are years 2012, 2013, 2026(Graph 8)
Most contributing to win were his 2PT percentages & 3PT percentages(Graphs 6.X)
Steph has possitive correlation between Field Goal percentage and points scored.(Graph 7)
Steph is also a dominant player who averages 34 minutes per game.(full game = 48 Minutes)(Graph 11)
Steph's scoring ability combined with points from assists have enormously contributed to his team winning
With peaks of 40% point contribution(Graph 9)

3. Did facility location (Home/Away) impact Steph's game?

Analyzing Home and Away games shows that Steph was almost indifferent to Facility location.
With slight changes and ambiguous stats, some even leaning towards away lost games(Graphs 11, 12 & 13).
However, when it comes to efficiency, you can see that in home games Steph did perform slightly better(Graph 14).

4. What is Steph's 'best' shot?

In raw numbers and dry stats, 2PT is the most contributing shot to score Steph has.(Graph 15)
However, when calculating new PPS & PPP stats 3PT rises well above 2PT shot touching the Elite line from above merely once.
Also, it is the 3PT shot that made Steph able to penetrate and score 2PT so efficiently, in many cases even being double teamed.
